## Wire Welding & Compacting Solutions

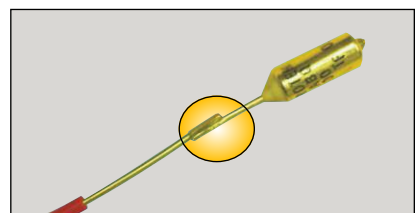

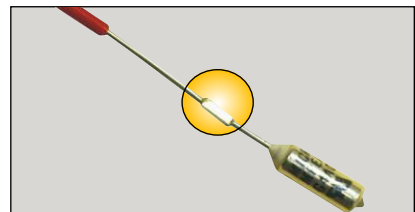

AMADA MIYACHI's MC-1301 **wire compactor** is specifically designed for solid and stranded wire welding applications. The unique compacting mechanism produces a solid fused weld joint with single or multiple parts. Tungsten electrodes with ceramic tooling inserts heat, weld and compact the flow of metal from the sides. The system utilizes either an AC or inverter welding power supply and a stacked cylinder design which permits a wide range of force control.

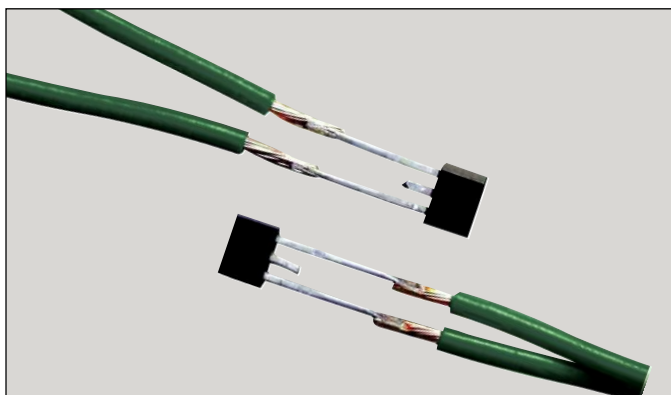

Applications include wire welding, wire harness welding, compacting of stranded wires prior to welding and multiple wire assemblies.

### KEY FEATURES

- Ceramic jaws hold parts during the welding operation producing a solid fused weld joint
- Easy set up and maintenance
- Closed loop welding control
- Inverter or AC weld transformer integrated into head package
- Water-cooled electrodes
